Business Continuity Manager 1.00.01 Features

Business Continuity Manager is certified with SQLE 17.10.

Business Continuity Manager 1.00.01 Resolved Issues

The following issues have been fixed:

Reference	Description
GS-151742	Business Continuity Manager marks an SQL as deterministic when Non-Unique Primary Index (NUPI) is used in the ORDER BY clause for an OVER statement.
GS-152924	Business Continuity Manager cannot track the uniqueness of the primary index.
BCMGR-76	The alert message displayed when the standby sequencer is unavailable lacks clarity.
BCMGR-103	The user-selected Rows per page value is not retained on the Objects page.
BCMGR-61	The CREATE PREFERRED routing rule and WRITE rule with one Teradata system violate the active-standby configuration behavior.
BCMGR-112	The SYSTEM REMOVE option is not working as expected from the UI and REST API.
