Product Safety

Safety type	Description
NOTICE	Indicates a situation which, if not avoided, could result in damage to property, such as to equipment or data, but not related to personal injury.
CAUTION	Indicates a hazardous situation which, if not avoided, could result in minor or moderate personal injury.
WARNING	Indicates a hazardous situation which, if not avoided, could result in death or serious personal injury.

Warranty Disclaimer

Except as may be provided in a separate written agreement with Teradata or required by applicable law, the information contained in this document is provided on an "as-is" basis, without warranty of any kind, either express or implied, including the implied warranties of merchantability, fitness for a particular purpose, or noninfringement.

The information contained in this document may contain references or cross-references to features, functions, products, or services that are not announced or available in your country. Such references do not imply that Teradata Corporation intends to announce such features, functions, products, or services in your country. Please consult your local Teradata Corporation representative for those features, functions, products, or services available in your country.

The information contained in this document may be changed or updated by Teradata at any time without notice. Teradata may also make changes in the products or services described in this information at any time without notice.

Feedback

To maintain the quality of our products and services, email your comments on the accuracy, clarity, organization, and value of this document to: teradata-books@lists.teradata.com.

Any comments or materials (collectively referred to as "Feedback") sent to Teradata Corporation will be deemed nonconfidential. Without any payment or other obligation of any kind and without any restriction of any kind, Teradata and its affiliates are hereby free to (1) reproduce, distribute, provide access to, publish, transmit, publicly display, publicly perform, and create derivative works of, the Feedback, (2) use any ideas, concepts, know-how, and techniques contained in such Feedback for any purpose whatsoever, including developing, manufacturing, and marketing products and services incorporating the Feedback, and (3) authorize others to do any or all of the above.

Teradata Vantage™ is our flagship analytic platform offering, which evolved from our industry-leading Teradata® Database. Until references in content are updated to reflect this change, the term Teradata Database is synonymous with Teradata Vantage.

Advanced SQL Engine (was NewSQL Engine) is a core capability of Teradata Vantage, based on our best-in-class Teradata Database. Advanced SQL refers to the ability to run advanced analytic functions beyond that of standard SQL.

The following lists the fixed and known issues in this release. If you experience any of the following issues, open an incident with Teradata Customer Support and include the Reference ID in your description.

Fixed Issues

UDA AppCenter

Reference Number	Description
UDAPP-8143	**Description**: NF - Appcenter components can make calls to Azure resources seamlessly

Known Issues

Machine Learning Engine

Reference Number	Description
ANLY-8244	**Description**: For KNN function, automatic tuning of PartitionBlockSize might not be optimal. **Workaround**: Manually tune value of PartitionBlockSize.
ANLY-6958	**Description**: If an error message exceeds 256 characters, it is truncated to 256 characters. **Workaround**: None.
ANLY-6855	**Description**: The DecisionTree and AdaBoost functions can output a model table with no rows. The most likely cause is that the value of MinNodeSize is too large. This will also happen if the input table is empty. **Workaround**: None **Deployments**: All.
MLE-4095	**Description**: The machine learning engine limits the space allocated for meta-data to ten gigabytes. Under extreme workloads of many small queries, this can fill up before the three-day expiration period, causing all queries to fail with "internal error" being reported. **Workaround**: Contact Teradata Customer Support for assistance. **Deployments**: All.
MLE-3953	**Description**: When disk space hits 80% we set the QOS limit to 0 and should only allow drop/truncate statements to cleanup. This cleanup process however is blocked by the QOS rules, resulted in query failures: MLE_ERR_FFE: Admission denied (). **Workaround**: Contact Teradata Customer Support for assistance. **Deployments**: All.

MLE-3838	**Description**: Analytic applications, such as ML Engine, use UTC time zone. NewSQL Engine may have been set to non-UTC time zone. Time zone mu match between NewSQL Engine and the analytic applications; otherwise, data transferred between nodes is impacted. **Workaround**: Contact Teradata Customer Support for assistance.
MLE-3491	**Description**: The MLE connector stats handler thread continues to use old connector password after it is changed. **Workaround**: Contact Teradata Customer Support for assistance. **Deployments**: All.
MLE-3405	**Description**: ML Engine does not support QueryGrid link names that contain whitespace. **Workaround**: The administrator should not use whitespace in names when they create links between the ML engine and other components. Doing so causes an error in the Failure Detection and Restart capability of the ML engine. **Deployments**: All.
MLE-3031	**Description**: Some rows in ML Engine stats table may contain empty stats. **Workaround**: None. The rows with empty stats may be confusing, but do not affect anything.
MLE-2363	**Description**: Some data points for query-level utilization stats are missing from collected data. **Workaround**: This happens too rarely to have material impact on collected statistics. **Deployments**: All.
MLE-2220	**Description**: PERM space size of Query Level Monitoring (QLM) database is created with 10 Mb for each AMP. PERM space is full if QLM queries fail with [ERROR]: No more room in database td_mle_db. **Workaround**: None. **Deployments**: All.
MLE-1392	**Description**: Stored procedures in pm database, such as pm.install_afile, fail if first master node in analytic cluster is unavailable. **Workaround**: Administrator must log into each TPA node using ssh, then change the file /home/tdatuser/.ssh/ config to point to another node in analytic cluster.
TDAF-287	**Description**: Function arguments that specify multiple columns accept only lists of column names, not column ranges or a combination of column name and column ranges. **Workaround**: None.

Teradata for Azure

Reference Number	Description
ICAZURE-7917	**Description**: LDAP enablement with AppCenter is not supported in Azure 1.1. **Workaround**: None. **Deployments**: Azure.

Teradata QueryGrid

Reference Number	Description
QUERYGRID-11020	**Description**: In some cases, error message returned to end user lacks information about cause of error. **Workaround**: None. If you need additional information, contact Teradata Customer support to retrieve support bundle for failed query.

Advanced SQL Engine

Reference Number	Description
DBSQ-3762	**Description**: Error messages show old, nonstandardized argument and table names. **Workaround**: For old names that appear in error messages and their corresponding new names, see Teradata Vantage™ Machine Learning Engine Analytic Function Reference, B700-4003.

UDA AppCenter

Reference Number	Description
UDAPP-8661	**Description:** Customer will need to delete the malformed prometheus data to resolve errors in thanos compactor. **Workaround**: Remove the corrupted blocks and restart thanos compactor.
UDAPP-8648	**Description**: Ambassador needs to be restarted once new certificates are installed. This issue is intermittent. **Workaround** - restart ambassador pods, only If the the browser does not show updated certificates after install.
UDAPP-8601	**Description**: Apps with permissions revoked are visible to user, but if clicked it will throw permission error. **Workaround**: None.
UDAPP-8552	**Description**: Multibyte character app names do not work. **Workaround**: None.
UDAPP-8270	**Description**: Scheduled and Manual backups fail if Postgres data size is very large. If node does not have twice the space that Postgres has, backup fails with OOM or Pod Evicted. **Workaround**: Free up space in /var/lib/docker mount on machine where backup pods run. The space in this folder must be twice the size of the Postgres data.
UDAPP-8206	**Description**: Execution of OS commands is blocked from BTEQ apps. The . OS directive on BTEQ apps does not execute, but job shows status as successful. **Workaround**: Do not rely on job status when using BTEQ apps with . OS directive. Instead, see logs of apps, which display error messages related to failure in command execution.
UDAPP-8119	**Description**: Postgres fails to store large results. **Workaround**: Reduce size of query or split query into multiple parts.
UDAPP-7789	**Description**: Parsing fails for parameters with double hyphens **Workaround**: None.
UDAPP-7192	**Description**: Service accounts in AppCenter are not backed up by Scheduled or Manual backup. **Workaround**: Manually recreate all service accounts in AppCenter after restore.

Vantage

Reference Number	Description
VAN-31	**Description**: If table being transferred from NewSQL Engine to ML Engine has VARBYTE column and type of corresponding ML Engine column is incompatible with VARBYTE, error message says Found: bytea instead of Found: varbyte ; for example: NAIVEBAYESPREDICT: The column 'c_varbyte' specified in CategoricalInputs must be a member of one of the following SQL type groups: [INTEGER, STRING]. Found: bytea **Workaround**: On ML Engine, change column type from VARBYTE to BYTEA by calling procedure TD_SYSFNLIB.QGExecuteForeignQuery .
